Description	English for Information Technology 200 is an elective course for non-specialists, which aims to supply students with ways to describe and discuss the world of information technology in English. This is a world which, from their general life experience and general reading about news and developments, students already know a lot, at least in their first language. In this course all vocabulary and ways of expressing ideas in English students learn with regard to IT will help them considerably with study of English more generally.
Objectives	- Expanding students' vocabulary associated with information technology; - Improving learners' ability to read and analyse written texts; - Exposing students to a wide range of themes that arise when considering the prevalence and nature of IT in the modern world; - Teaching students to talk about the impact of IT on people's lives. - Encouraging students to learn more vocabulary and to follow their interests in a more self-directed manner.
Learning Outcomes	By the end of English for Information Technology, a student will be able to: LO1. recognise more lexis, especially from a list of course-specific, IT-related lexis LO2. better interpret any non-specialist texts on information technology themes; LO3. articulate both benefits and drawbacks of widespread IT use; LO4. synthesise information from a text to write a paragraph length analytical summary of the significance of one facet of IT; LO5. learn more about the world of information technology in English by means of both guided and self-directed research.
